UE23CS320B – Capstone Project Phase-2 ESA

Project Title :
Project ID :
Project Guide :
Project Team :

Outline

- Abstract
- Suggestions from Review – 1
- Suggestions from Review – 2
- Analysis and Critique of Research/Relevance - Application in Real world
- High Level Design
- Design Methodology
- Project Progress (Minimum 20% implementation)
  - Data Preprocessing and Base Model Implementation
- Individual Contribution
- References

Abstract

- Well defined problem statement.
- Provide a basic introduction of the project

Suggestions from Review – 1

- Provide the suggestions and remarks given by the Panel members.

- Mention the feasibility on the same showing the progress.

Suggestions from Review – 2

- Provide the suggestions and remarks given by the Guide.

- Mention the feasibility on the same showing the progress.

Analysis and Critique of Research/Relevance - Application in Real world

Analysis and Critique of Research:

- Evaluates the strengths and weaknesses of existing research.
- Identifies gaps, inconsistencies, or potential improvements.

Relevance:

- Examines whether the research aligns with current challenges and industry needs.
- Assesses how impactful the research is within its domain.

Application in the Real World:

- Determines how the research findings can be implemented practically.
- Explores use cases, scalability, and feasibility in real-world scenarios.

high-level design

Provide high-level design view of the system.

Identify the logical user groups, application components, data components, and interfacing systems. Illustrate the collaboration and interaction between the major components.

Design methodology

Technology Selection – Choose programming language, tools, and frameworks.

Apart from this add other components related to project

Project Progress-Data Preprocessing and Base model implementation

What is the project progress so far?
Minimum 20% implementation

Individual Contribution

Any other information

Provide any other information you wish to add on.

Note: Changes can be made in the template, with the consent of the guide for inclusion of any other information.

Capstone (Phase-I Phase-II and Phase III) Project Timeline

Provide

- The timelines for execution of the project through Gantt chart.
- The plan in terms of efforts by individuals in the team.
- Mention the tasks involved in different stages.

Conclusion

Summarize the key points.

References

Provide references pertaining to your research according to IEEE format.

Thank You
